

Surge Protectors

In the digital age we live in, our electronics have become more important to us. Storms can bring about the potential for thousands of dollars in damage to your electronics, and priceless damage in lost digital content. Surge protection devices can prevent this and other possible effects. When you hire David Aldred Electric to install surge protectors in your home, you can protect your equipment from:

Lightning: Powerful lightning strikes during storms can cause significant and devastating surges.

Utility Malfunction: Home surge protection can also prevent damage caused by issues with your electric provider, such as capacitor switching, inductive loads, and more.

Internal Issues: You can also experience a surge from appliances within your home. Refrigerators, dishwashers, and laundry machines all have motors that can cause a damaging surge of electricity.
